HDAV Homes
Audio Video Solutions

Lagotek has developed the “Home Intelligence Platform”, a whole home automation system that is suited for the condominium homes in the EOTB development. EOTB residents deserve the luxury of having full control over the most important features in their home - Lighting, Climate, Camera Monitoring, Security, Distributed Audio, Intercom, Motorized Shade Control, Distributed HD Video, and Remote Access via cell phone and PC. Lagotek provides wireless whole home automation at a price-point that makes sense for all EOTB condominium homes. Staying “green” is an important initiative for Lagotek and we are constantly researching new functions associated with green technologies. We have worked closely with interior designers to create the elegant design of our touch-screen controller, the HIP 100. This fully integrated computer makes home control easy by using a non-intimidating icon based user interface. A certified Lagotek dealer creates a wireless network that lets each installed system cater to the needs and desires of every homeowner. Each system can be expanded, when desired, with ease. Our IP based system removes maintenance concerns by making it easy for dealers to monitor and troubleshoot individual unit systems remotely.
